Backend

Java 8/17+Spring BootSpring MVCSpring SecurityHibernate/JPAJDBCREST APIJWT

Frontend

Angular (17+)TypeScriptRxJSNgRxReactive FormsHTML5/CSS3SCSSBootstrap

Databases

OraclePostgreSQLPostGISMySQLH2SQL Optimization

DevOps & Tools

DockerGit/GitLabTeamCityMavenJiraSonarQubePostman

SUMMARY

I am a Full-Stack Engineer with over **4+ years of experience** building high-reliability web applications and enterprise systems, with a strong focus on the **MedTech domain**. On the **frontend**, I specialize in creating responsive, data-driven interfaces using **Angular** and reactive patterns. On the **backend**, I develop secure and high-performance systems using **Java and Spring Boot**, and have hands-on experience migrating legacy monoliths into **Dockerized microservices**. My focus is on writing clean, maintainable code while ensuring strict compliance with industry standards and business goals.

EXPERIENCE

Full-Stack Software Engineer @ ISD

Nov 2022 – Present

Domain: MedTech / Laboratory Information Systems (LIS)

- Developing robust backend services using Java 17+, Spring Boot, Spring MVC, and JDBC (JdbcTemplate) in the MedTech domain.
- Working closely with high-load Oracle databases, writing performant SQL queries, and analyzing execution plans to optimize data processing.
- Designing and implementing complex client-side Angular modules featuring Reactive Forms and advanced dynamic validation logic.
- Participating in microservices architecture design, ensuring the delivery of clean, modular, maintainable, and highly testable code.
- Conducting comprehensive code reviews, reviewing technical solutions, and mentoring junior and trainee developers to improve team code quality.
- Utilizing GitLab, TeamCity, SonarQube, Jira, and Postman within the daily CI/CD and agile development workflow.

FEATURED PROJECTS

LIS (Laboratory Information System)

Commercial

An Enterprise-grade Laboratory Information System (LIS) designed to automate clinical laboratory workflows. Built robust RESTful APIs and microservices on the backend, and created reactive, user-friendly interfaces for medical data processing on the frontend.

Tech: Java, Spring Boot, Angular, TypeScript, REST API, RxJS

Booker (SaaS Marketplace)

Personal Project

A multi-tenant SaaS marketplace for service-based businesses. Features geo-proximity search with PostGIS, conflict-safe booking via PostgreSQL advisory locks, dynamic service attributes with JSONB validation, JWT + RBAC auth, and real-time WebSocket notifications.

Tech: Java, Spring Boot, Angular, PostgreSQL, PostGIS, NgRx, Docker, TypeScript

Spring Auth Starter & ng-auth-lib

Open Source

A ready-to-use Spring Boot authentication library providing JWT login/logout, token refresh, and validation out of the box, paired with an Angular companion library that provides interceptors, guards, and automatic token management.

Tech: Java, Spring Boot, Spring Security, JWT, Angular, TypeScript, RxJS

EDUCATION & BACKGROUND

Intensive Full-Stack Software Engineering Training

2022

Focus on Spring MVC, Spring Security, Spring Data, Hibernate, Servlet API.

Foundations of Software Development

2020 – 2022

Low-level execution (Assembler at DOS/BIOS level), OOP in C/C++ (SFML), and Mobile Development (Android Studio).

Bachelor in Computer Engineering

2020 – 2024

National Aviation University (NAU)

Focus on Low-level hardware execution (Assembler), OOP (C/C++), and Mobile Development (Android Studio).
